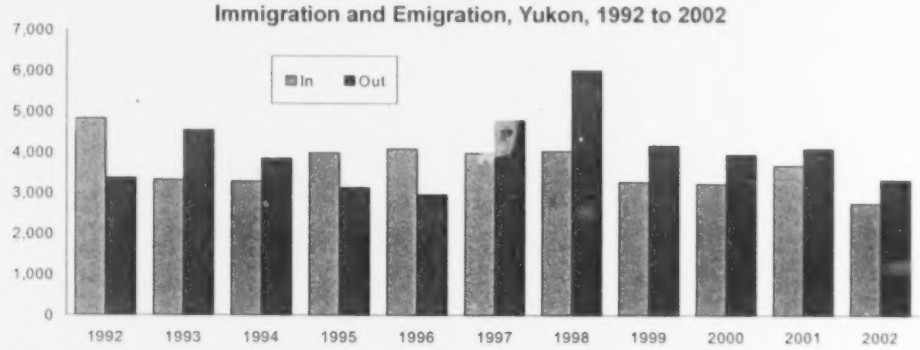
BUREAU OF STATISTICS

Yukon Migration Patterns 2002

Highlights

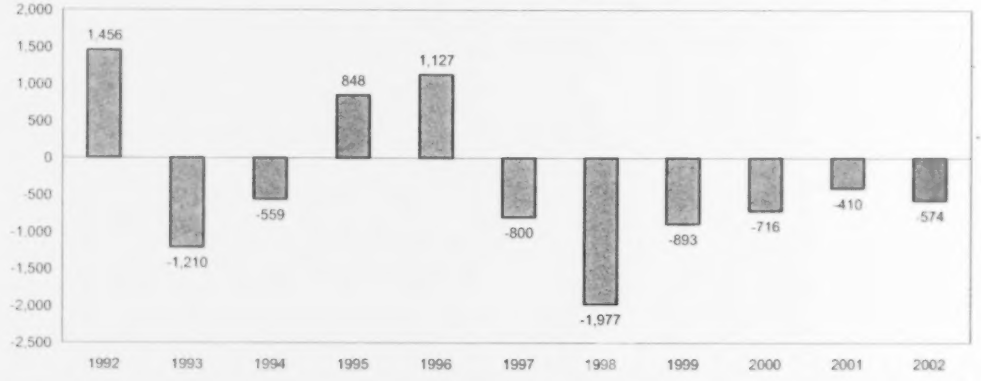
This report examines migration patterns in the Yukon and is divided into three sections. The first section looks at immigration and emigration for the Yukon from 1992 to 2002. It examines both quarterly and yearly migration patterns by gender and age. The second section looks at the median length of residency in the Yukon for out-migrants (those who have moved out of the Yukon during the year) and non-migrants (those who remained resident in the Yukon during the year) by gender, age and ethnicity from 1997 to 2002. The third section compares continuous length of residency in the Yukon in 2002 with 1997, also by gender, age and ethnicity. All of the migration numbers used in this report are based statistically on the Yukon Bureau of Statistics' population data (which are based on the Yukon Health Care registration file).

Immigration and Emigration, Yukon, 1992 to 2002



From 1997 through 2002, more people have moved out of the territory than have moved into the territory. In 2002, 3,333 people emigrated from the Yukon, while 2,759 people immigrated to the Yukon.

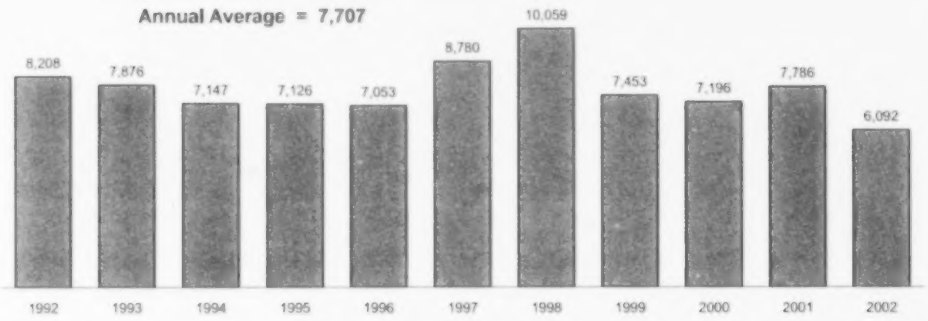
Net Migration, Yukon, 1992 to 2002



Net migration is the difference between the number of people entering the Yukon (immigration) and the number of people leaving the Yukon (emigration). From 1992 to 2002, average annual net migration for the Yukon was -337. Since 1992, the Yukon has experienced two periods of population growth and two periods of population decline. The largest increase in the Yukon population occurred in 1992 when net migration equalled 1,456, and the largest decrease was in 1998 when net migration was -1,977.

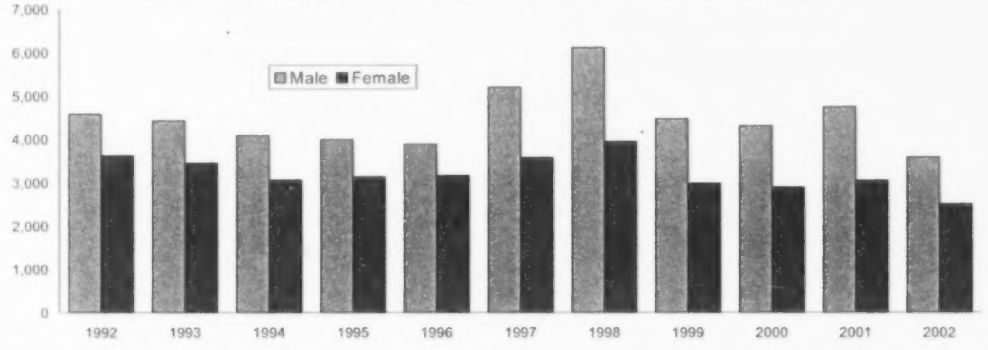
Yearly Turnover

Turnover (Immigration plus Emigration), Yukon, 1992 to 2002



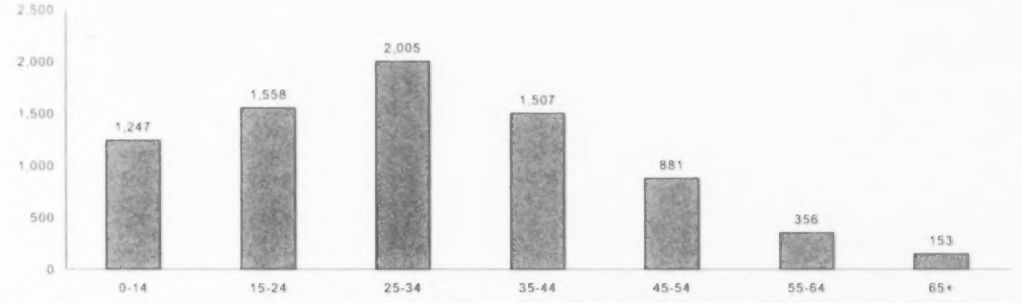
From 1992 to 2002, the average annual turnover (immigration plus emigration) for the Yukon was 7,707. Turnover shows the segment of the population that is mobile and affects things such as the housing market, rental prices and vacancy rates.

Turnover (Immigration plus Emigration) by Sex, Yukon, 1992 to 2002



Since 1992, more men than women moved into or out of the territory, indicating that in the Yukon men are more mobile than women. From 1992 to 2002, the average annual turnover was 4,490 for men and 3,217 for women.

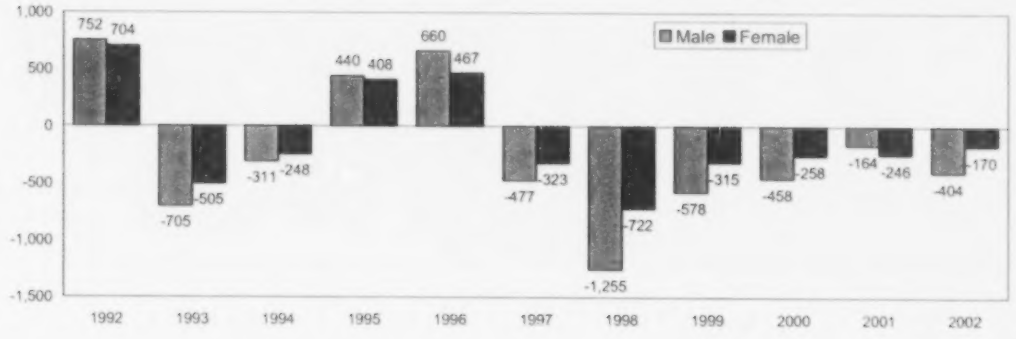
Average Turnover (Immigration plus Emigration) by Age, Yukon, 1992 to 2002



People in younger age groups are also more mobile. Average annual turnover from 1992 to 2002 shows that fewer people in age groups 45 - 54, 55 - 64 and 65+ are moving into or out of the territory. The age group with the highest average annual turnover was the 25 - 34 year old age group (2,005).

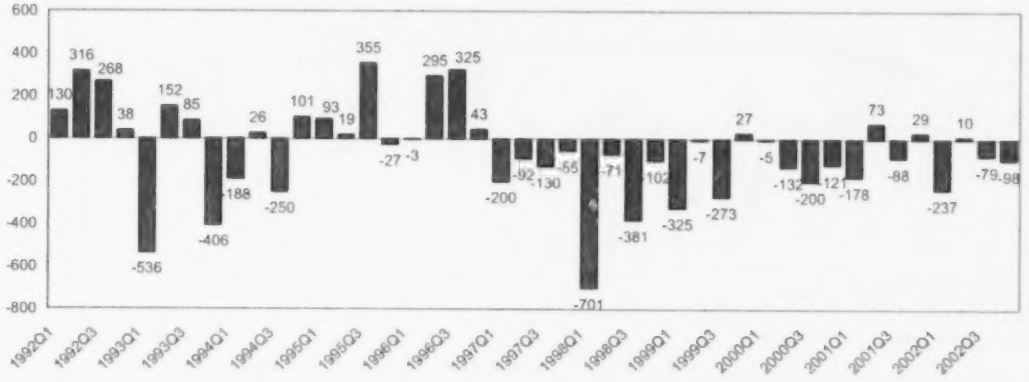
Migration by Sex

Net Migration by Sex, Yukon, 1992 to 2002



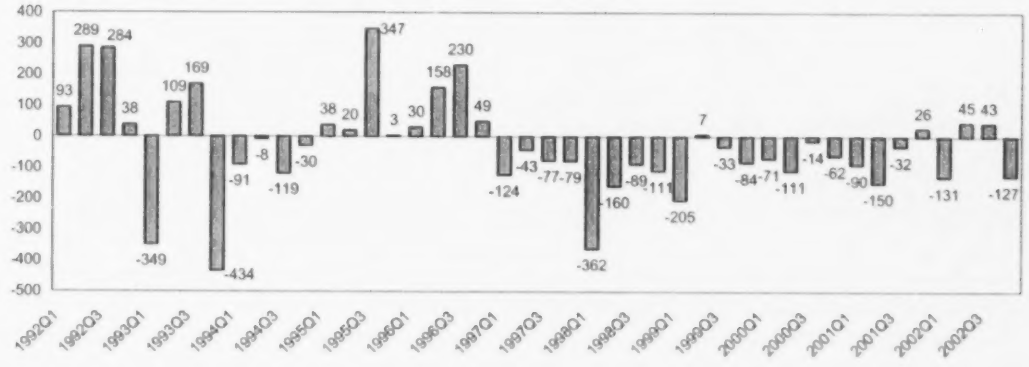
The pattern of net migration is similar for males and females, although males are more mobile, exceeding females in migration in each year except 2001. From 1992 to 2002, average annual net migration was -227 for males and -110 for females. Since 1997, net migration has been negative for both males and females.

Net Migration, Males, Yukon, 1992 to 2002



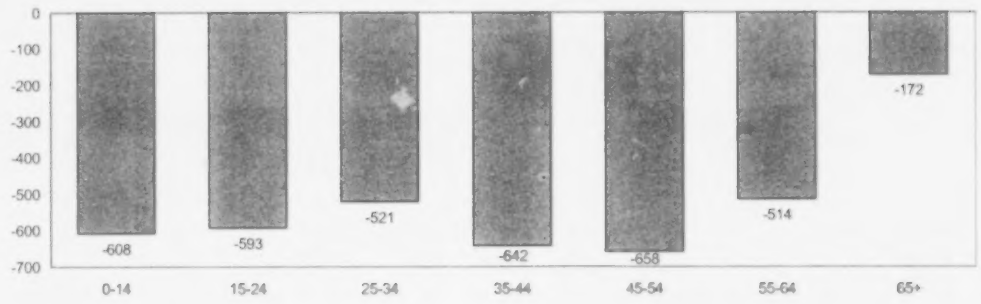
Net migration patterns by quarter are also similar for males and females, although in some quarters net migration for females exceeded net migration for males. From 1992 to 2002, average quarterly net migration was -57 for males and -27 for females.

Net Migration, Females, Yukon, 1992 to 2002



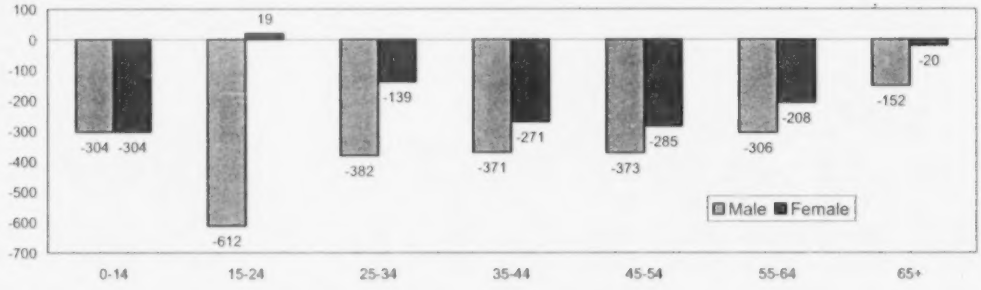
Migration by Age

Total Net Migration by Age, Yukon, 1992 to 2002



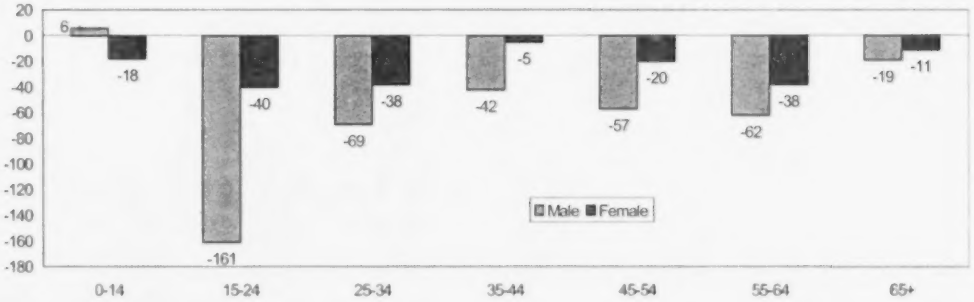
Net migration by age group shows that all age groups decreased between 1992 and 2002. From 1992 to 2002, the age group with the largest decrease in population was the 45-54 year old age group (-658).

Total Net Migration by Age and Sex, Yukon, 1992 to 2002



The pattern of net migration by age is similar for males and females with the exception of the 15 - 24 year old age group. The female population in this age groups increased slightly, by 19, between 1992 and 2002. All other male and female age groups decreased during this time period.

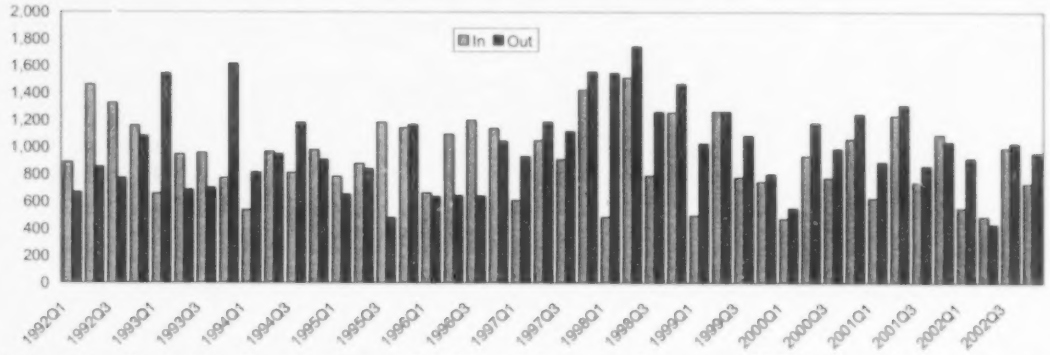
Total Net Migration by Age and Sex, Yukon, 2002



In 2002, net migration by age was negative in all age groups except for males in the 0-14 age group. The age group with the largest negative net migration (-161) was the 15-24 year old male category. Female net migration was negative in all age groups.

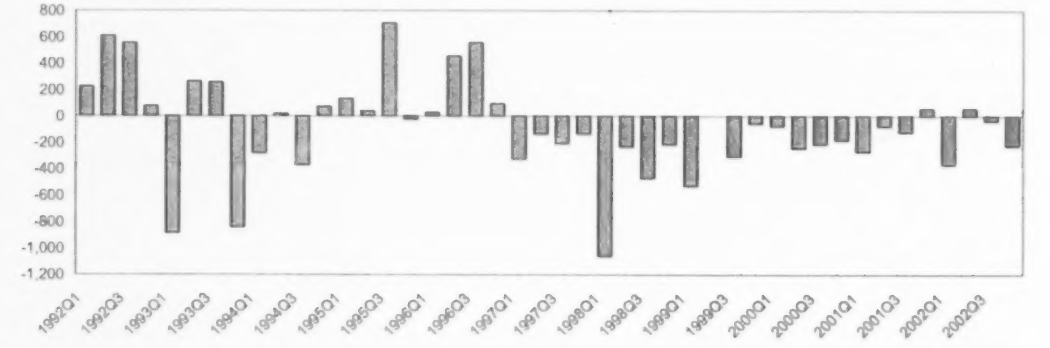
Migration by Quarter

Immigration and Emigration by Quarter, Yukon, 1992 to 2002



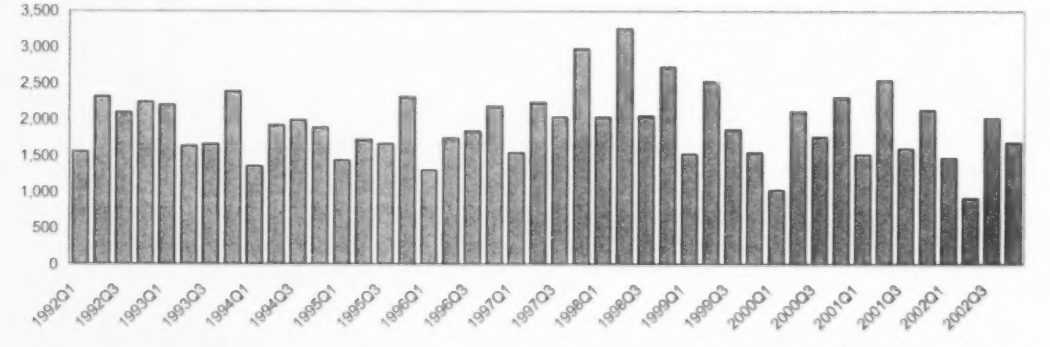
With the exception of the fourth quarter of 2001 and the second quarter of 2002, since the first quarter of 1997, more people have moved out of the Territory in each quarter than have moved into the Territory. From 1992 to 2002, average quarterly immigration for the Yukon was 921 and average quarterly emigration was 1,006.

Net Migration by Quarter, Yukon, 1992 to 2002



Since 1992, net migration has been positive in 17 quarters and negative or zero in 27 quarters. From 1992 to 2002, average quarterly net migration for the Yukon was -84. Net migration reached a high of 702 in the third quarter of 1995, and a low of -1,063 in the first quarter of 1998.

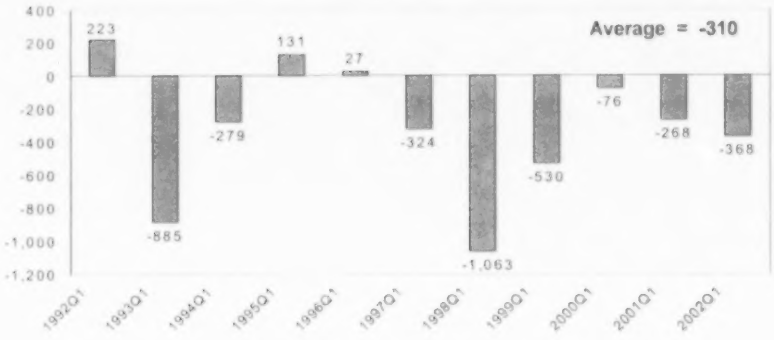
Turnover by Quarter, Yukon, 1992 to 2002



From 1992 to 2002, the average turnover in each quarter was 1,927. Turnover reached a high of 3,255 in the second quarter of 1998 and a low of 919 in the second quarter of 2002.

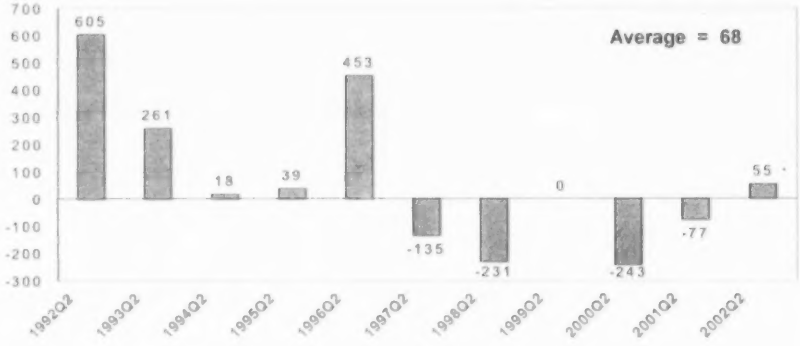
Migration by Quarter

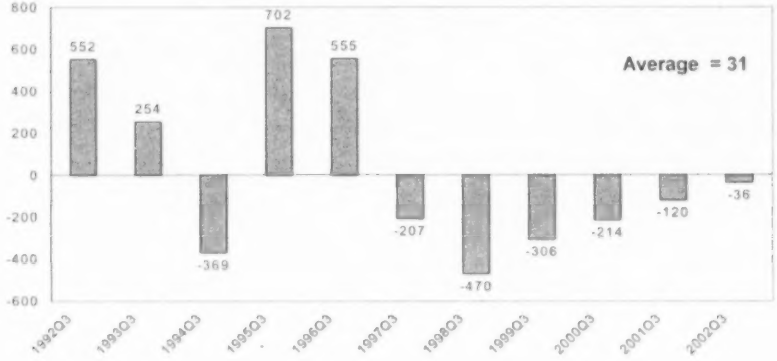
Net Migration by Quarter, Yukon, 1992 to 2002



From 1992 to 2002, average net migration in the first quarter was -310. On average, fewer people immigrated to the Yukon during the first quarter when compared with other quarters.

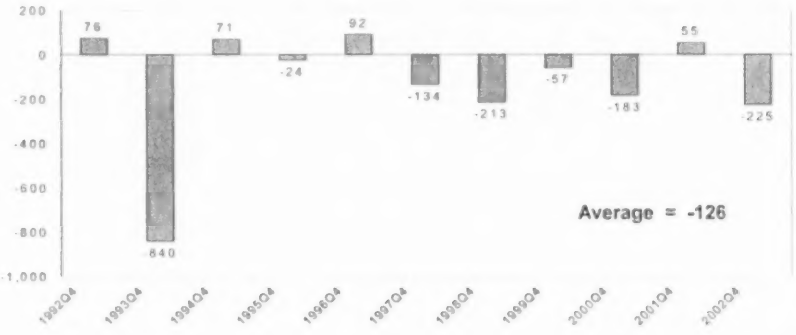
From 1992 to 2002, average net migration in the second quarter was 68. On average, more people immigrated to the Yukon during the second quarter when compared with other quarters.





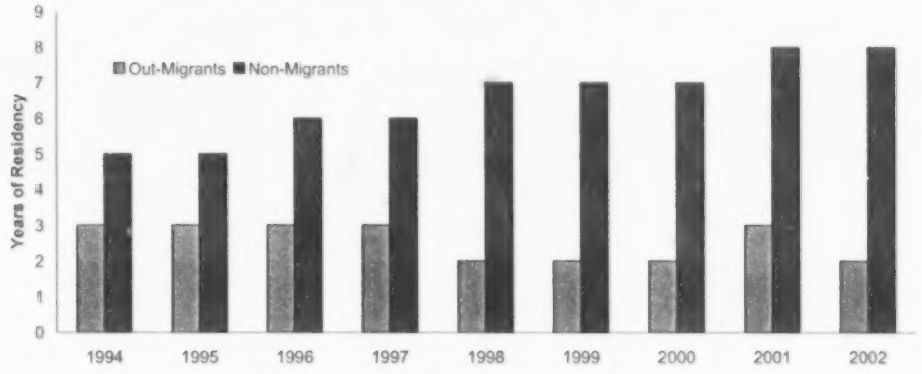
From 1992 to 2002, average net migration in the third quarter was 31. On average, turnover in the third quarter was higher than the first quarter, but lower than the second and fourth quarters.

From 1992 to 2002, average net migration in the fourth quarter was -126. On average, turnover in the fourth quarter was the highest (2,215), with the second quarter being the second highest (2,082).



Median Length of Residency

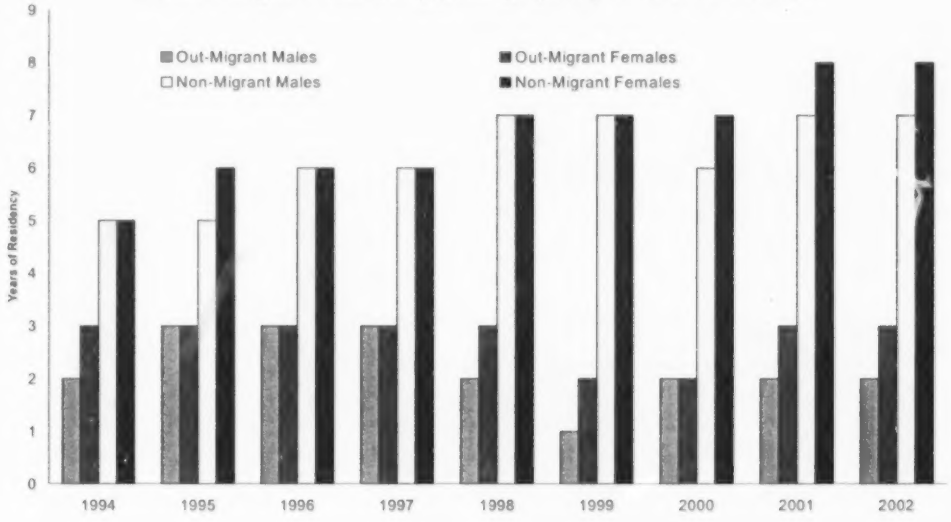
Median Length of Residency (Years), Yukon, 1994 to 2002



In 2002, the median length of residency for out-migrants (those who moved out of the Yukon during the year) was two years. This was a decrease from 2001, when the median length of residency was three years, and is the same as the figure for the years 1998 through 2000.

In 2002, the median length of residency for non-migrants (those who remained resident in the Yukon during the year) was eight years. The median length of residency for non-migrants has increased steadily since 1994. This indicates that the out-migrant population has become slightly more mobile than it was in 2001 and the non-migrant population has become less mobile since 1994.

Median Length of Residency (Years), by Sex, Yukon, 1994 to 2002

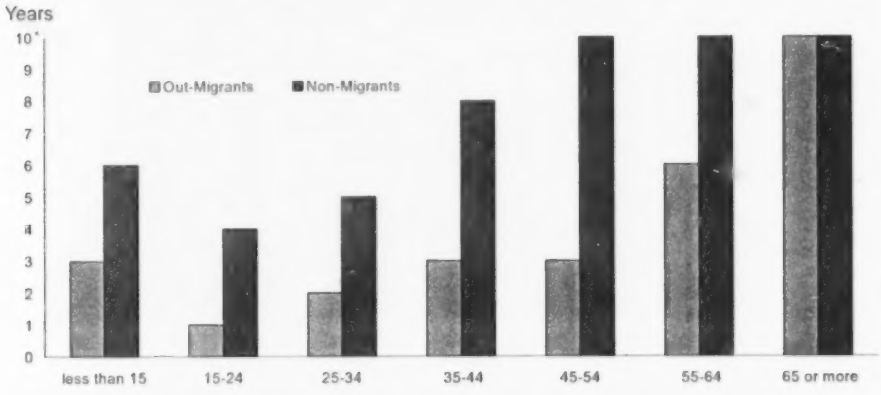


From 1994 to 2002, the median length of residency for out-migrant males and out-migrant females showed that males were slightly more mobile than females. In 2002, the median length of residency for out-migrant males was two years, with three years for females.

Non-migrant males and non-migrant females also have similar migration patterns, although in 2002 non-migrant males were slightly more mobile than non-migrant females.

Median Length of Residency

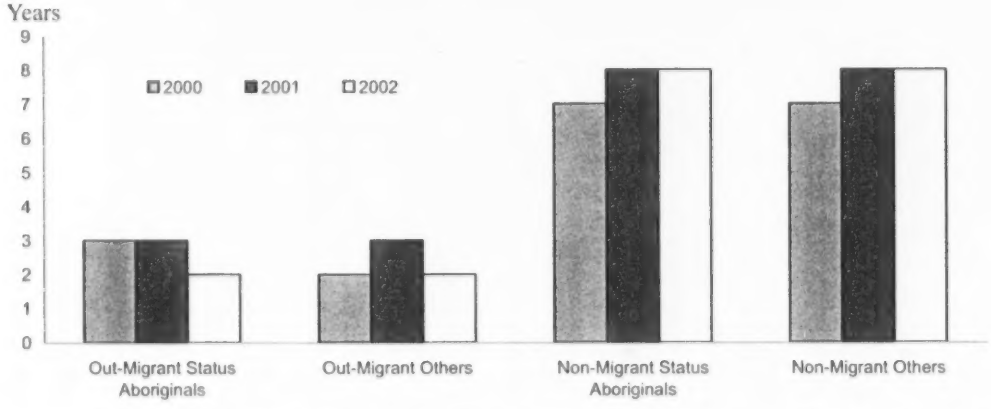
Median Length of Residency (Years), by Age, Yukon, 2002



* Refers to median length of residency as 10 or more years. Data after ten years is limited by the Yukon Health Care Registration file.

The median length of residency for out-migrants and non-migrants increases with age (with the exception of the 15 -.24 year old age group). People in younger age groups are more mobile than people in older age groups. In each age group, out-migrants are more mobile than non-migrants. From 1994 to 2002, the median length of residency for non-migrants over 55 years of age has been 10 or more years.

Median Length of Residency (Years), by Ethnicity, Yukon, 2000 to 2002

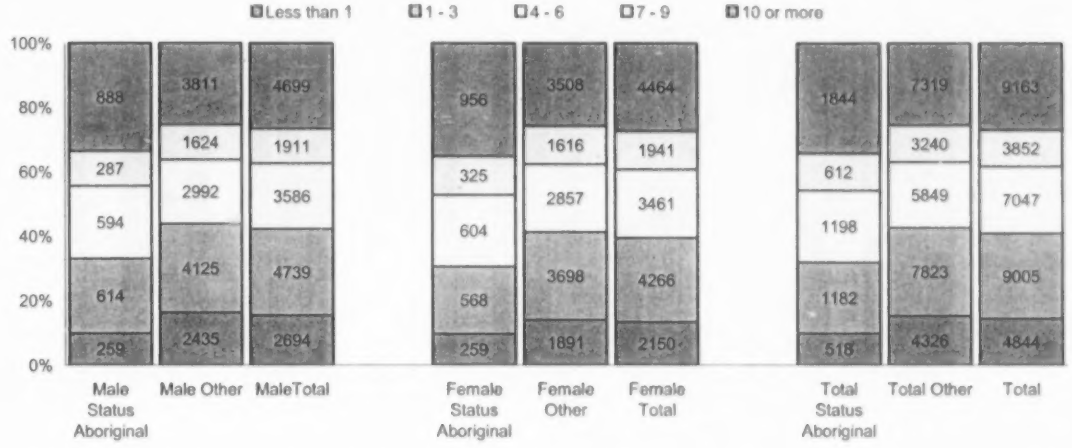


On average for 2002, the median length of residency for aboriginal out-migrants and non-aboriginal out-migrants showed that aboriginals were equally mobile as non-aboriginal out-migrants. In 2002, the median length of residency for aboriginal out-migrants was two years, which was the same as for other out-migrants.

The migration patterns for non-migrant aboriginals and other non-migrants are similar to the patterns of the out-migrant population. In 2002, the median length of residency for non-migrant aboriginals was eight years, which was also the same for other non-migrants.

Length of Continuous Residency

Length of Continuous Residency (Years), by Ethnicity and Sex, Yukon, 1997

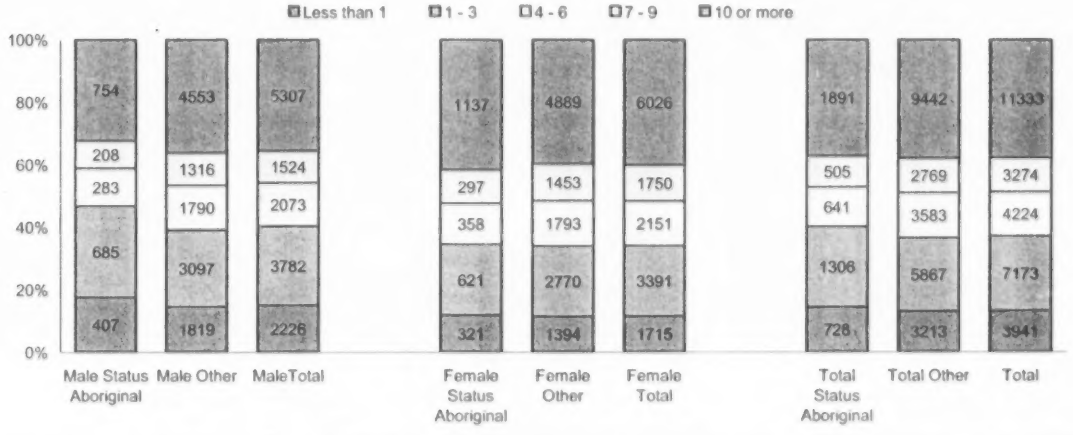


In 2002, all residency groupings declined compared with 1997, except for the 10 or more years residency grouping. This may be due to a combination of factors: people in those residency groups emigrated from the Yukon between 1997 and 2002 or their length of continuous residency increased, especially those in the seven - nine year group, which may now be part of the 10 year or more group.

The 10 years or more group increased by 2,170 people, or 23.7%, from 1997 to 2002. The largest decrease in any residency group was in the 4 - 6 year group, which decreased by 2,823 people, or 40.1%, from 1997 to 2002. From 1997 to 2002, there was also a decrease in the number of people whose continuous length of residency was less than one year, indicating that fewer people are immigrating to the Yukon.

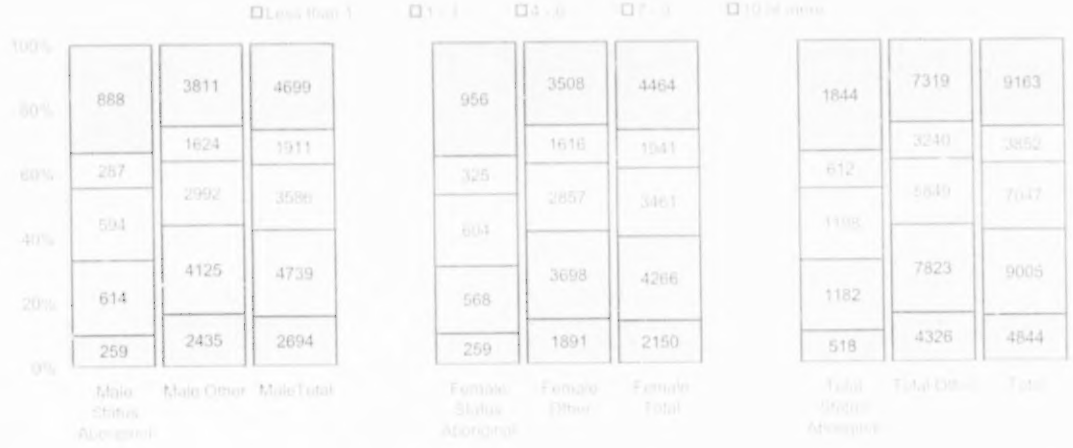
There is no significant difference between the percentage of status aboriginals (37.3%) in residency group 10 or more years when compared with other residents (38.0%). In residency group 10 or more years, 53.2% were female. This indicates that females are slightly less mobile than males.

Length of Continuous Residency (Years), by Ethnicity and Sex, Yukon, 2002



Length of Continuous Residency

Length of Continuous Residency (Years), by Ethnicity and Sex, Yukon, 1997

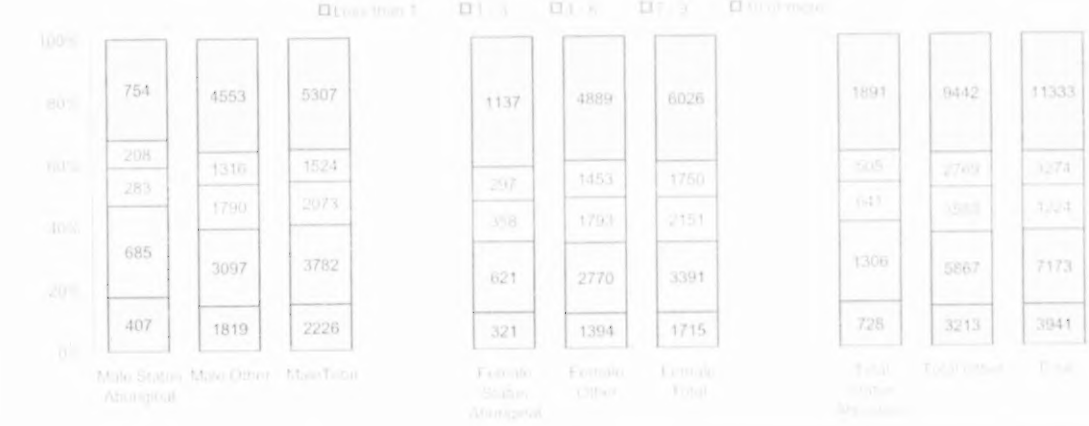


In 2002, all residency groupings declined compared with 1997, except for the 10 or more years residency grouping. This may be due to a combination of factors: people in those residency groups emigrated from the Yukon between 1997 and 2002 or their length of continuous residency increased; especially those in the seven - nine year group, which may now be part of the 10 year or more group.

The 10 years or more group increased by 2,170 people, or 23.7%, from 1997 to 2002. The largest decrease in any residency group was in the 1 - 6 year group, which decreased by 2,823 people, or 40.1%, from 1997 to 2002. From 1997 to 2002, there was also a decrease in the number of people whose continuous length of residency was less than one year, indicating that fewer people are immigrating to the Yukon.

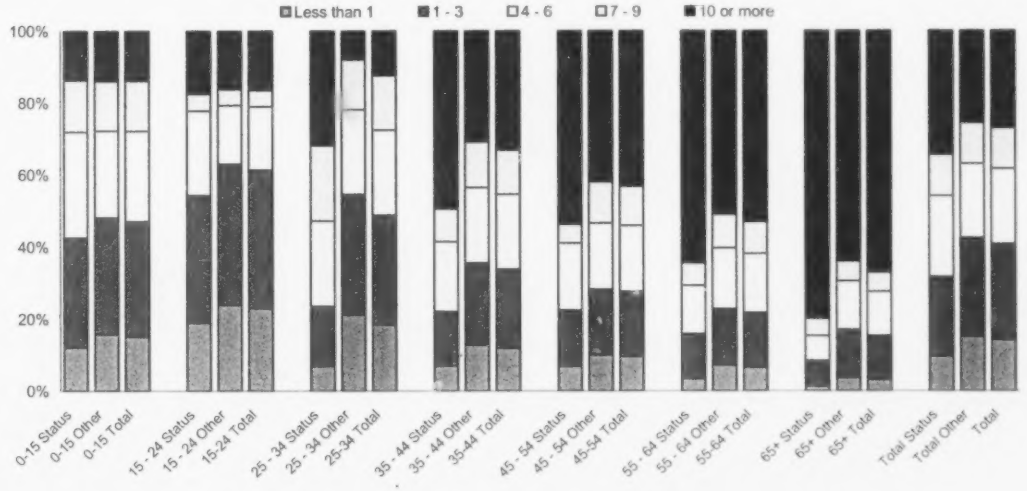
There is no significant difference between the percentage of status aboriginals (37.3%) in residency group 10 or more years when compared with other residents (38.0%). In residency group 10 or more years, 53.2% were female. This indicates that females are slightly less mobile than males.

Length of Continuous Residency (Years), by Ethnicity and Sex, Yukon, 2002



Length of Continuous Residency

Length of Continuous Residency (Years), by Ethnicity and Age, Yukon, 1997



The length of continuous residency for status aboriginals and other residents increases with age. People in younger age groups are more mobile than people in older age groups. In 2002, almost two thirds (65.9%) of residents older than 55 were continuous residents in the Yukon for 10 years or more.

The most mobile age group in the Yukon is the 25 - 34 year old group. This group has the lowest percentage of people who have lived in the Yukon continuously for 10 or more years. The 15-24 year old age group has a high percentage of people who have lived in the Yukon for less than one year. Status aboriginals are less mobile than other residents in the 25 - 34, 35 - 44 and 65+ year old age groups.

From 1997 to 2002, the number of people that have lived in the Yukon continuously for 10 or more years increased in each age group, with the exception of the 25 - 34 and 35 - 44 year old groups.

Length of Continuous Residency (Years), by Ethnicity and Age, Yukon, 2002

Non-Migrant Others	5	5	6	6	7	7	7	8	8

Notes: '10' refers to median length of residency as ten or more years. Data after ten years is limited by the Yukon Health Care Registration file.

This data was generated by comparing January 1st populations in successive years. Anyone who is in both datasets is considered a non-migrant. Anyone who moved out and moved back in within a single calendar year is counted as a non-migrant. Those who were in the population dataset on January 1st of a given year and not in the dataset on the following January 1st are counted as out-migrants.
